

Escalation of privileges under Linux

Course: **00167**

Filter: **Beginner**

Duration: **2 days**

Category:: **Linux & Unix**

Price: **197,00 €**

About Course

Dive into privilege escalation techniques on Linux systems, focusing on configuration errors and vulnerable binaries. Linux systems, focusing on configuration errors and vulnerable binaries. This course is based on real cases encountered in the workplace.

What you'll learn

- Understand the basics of configuration errors on Linux
- Strengthen your systems by identifying and correcting common vulnerabilities

Targeted audience

- Security managers
- Network administrators

Pre-requisites

- None

Curriculum

Module 1: The basics of configuration errors on Linux

-

Module 2: Identifying common vulnerabilities

-

Module 3: Practical techniques for exploiting vulnerabilities

-

Module 4: Fixing common vulnerabilities

-

Module 5: Lab: Practical exploitation of SUID binaries and other basic configurations seen in companies

-
