

Network Essentials Labs

Course: 00096

Filter: **Débutant**

Duration: **20 hours**

Category:: **Networking**

Price: **3000,00 €**

About Course

Confidently design, configure, manage, troubleshoot, and analyze traffic of any wired and wireless networks. This Network Essentials lab bundle, which includes 16 distinct, hands-on labs focused on security that will prepare you to work with a variety of hardware, software and networks, making you a more well-rounded IT professional. This lab bundle is designed to align to the learning objectives found in CompTIA's Network+ certification — Course 2032, Certified Network Defender (CND) Certification Training.

What you'll learn

- Practice the objectives presented in CompTIA's Network+ certificationConfidently design, configure, manage, troubleshoot, and analyze traffic of any wired and wireless networksWork with a variety of hardware, software, and networks

Pre-requisites

None

Curriculum

Module 1: Additional Scanning Options

-

Module 2: Applying Filters to TCPDump and Wireshark

-

Module 3: Denial of Service PCAP Analysis

-

Module 4: Firewall Setup and Configuration

-

Module 5: Gap Analysis of Firewall Rules

-

Module 6: IDS Setup

-

Module 7: Monitoring Network Traffic

-

Module 8: Network Segmentation (FW/DMZ/WAN/LAN)

-

Module 9: Open Source Collection

-

Module 10: Preliminary Scanning

-

Module 11: Scanning from Windows

-

Module 12: Setting Up Zones in a Firewall

-

Module 13: Specialized Linux Port Scans

-

Module 14: System Hardening

-

Module 15: TCPDump

-

Module 16: Using Snort and Wireshark to Analyze Traffic

-
